4. HOW THIS RESULT WAS CREATED — BIRD'S EYE OVERVIEW

Every TRUE-10 evaluation passes through 10 structural processing layers before producing a score. Each layer maps to one or more of the 5 output dimensions.

Layer	Name	Processing Role
1	Ingestion & Normalization	Tokenize and normalize input: $T \rightarrow T'$
2	Embedding Layer	$H2 = E(T')$ -- semantic token embeddings
3	Local Attention	$H3 = LocalAttn(H2)$ -- identify relevant spans
4	Global Attention	$H4 = GlobalAttn(H3)$ -- structure and flow
5	Multi-Head Perspective	$H5 = MHA(H4)$ -- tone, bias, framing
6	Contextual Disambiguation	$H6 = CtxDisamb(H5)$ -- resolve ambiguity
7	Consistency & Logic	$H7 = Reason(H6)$ -- detect contradictions
8	Cross-Reference	$H8 = CrossRef(H7, K)$ -- validate vs knowledge K
9	Scoring	$s(d) = Score(d)(H8)$ -- produce dimension scores
10	Governance	$A = G(T', H2...H9, s)$ -- apply compliance rules

4.1 Dimension to Layer Mapping

Dimension	Layers	What It Measures
Truthfulness	7, 8, 9	Factual accuracy, contradiction detection
Clarity	3, 4, 6, 9	Structure, readability, unambiguous language
Manipulation Integrity	5, 6, 7, 9	Freedom from bias, framing & emotional loading
Timeliness	1, 8, 9	Relevance and currency of information
Effectiveness	3, 4, 9	Communication of intended message

5. SPECIFICATION REQUIREMENTS — HOW EACH WAS ADDRESSED

Evaluated against TRUE-10 spec true10-v0.1. Note: domain weights for **SOCIAL** differ from defaults — this is correct per spec §7, not a violation.

6. DOCUMENT SUMMARY

[TRUE-10 GOVERNANCE REACTOR] 1587 words, 75 sentences. Hypercube: 4/100 cells with evidence. $L_{\text{true}}=0.601$ | $L_{\text{hyper}}=0.028$ | $D=0.96$. MVIF FlowEff=1.667 (Strong governance flow). $EE(t)=0.443$ ($\lambda=0.12$, $t=0\text{yr}$). FK grade: 15.21 | ELI: 0.504. Governance Quality: 25.15/100.
