X FAIL (min 65)

Insufficient governance evidence. Layer scores — L(d)=0.96, G(d)=0.0, D=0.891. Formula: $0.25 \times 0.96 + 0.60 \times 0.0 + 0.15 \times 0.891 = 0.35$. ELI: 0.0/100 words | Absolutist: 2 | Hedging: 2 (positive). Hypercube: 0/20 cells with evidence. SIS flags: Commitment stated without operational mechanism.

TIMELINESS — Relevance and currency of information

✓ PASS

Insufficient governance evidence. Layer scores — L(d)=0.2, G(d)=0.0, D=0.891. Formula: $0.25 \times 0.2 + 0.60 \times 0.0 + 0.15 \times 0.891 = 0.2$.

EFFECTIVENESS — Communication of intended message

✓ PASS

Insufficient governance evidence. Layer scores — L(d)=0.451, G(d)=0.0, D=0.891. Formula: $0.25 \times 0.451 + 0.60 \times 0.0 + 0.15 \times 0.891 = 0.222$. 4. HOW THIS RESULT WAS CREATED — BIRD'S EYE OVERVIEW

Every TRUE-10 evaluation passes through 10 structural processing layers before producing a score. Each layer maps to one or more of the 5 output dimensions.

Layer	Name	Processing Role
1	Ingestion & Normalization	Tokenize and normalize input: $T \rightarrow T'$
2	Embedding Layer	$H2 = E(T')$ -- semantic token embeddings
3	Local Attention	$H3 = LocalAttn(H2)$ -- identify relevant spans
4	Global Attention	$H4 = GlobalAttn(H3)$ -- structure and flow
5	Multi-Head Perspective	$H5 = MHA(H4)$ -- tone, bias, framing
6	Contextual Disambiguation	$H6 = CtxDisamb(H5)$ -- resolve ambiguity
7	Consistency & Logic	$H7 = Reason(H6)$ -- detect contradictions
8	Cross-Reference	$H8 = CrossRef(H7, K)$ -- validate vs knowledge K
9	Scoring	$s(d) = Score(d)(H8)$ -- produce dimension scores
10	Governance	$A = G(T', H2...H9, s)$ -- apply compliance rules

4.1 Dimension to Layer Mapping

Dimension	Layers	What It Measures
Truthfulness	7, 8, 9	Factual accuracy, contradiction detection
Clarity	3, 4, 6, 9	Structure, readability, unambiguous language
Manipulation Integrity	5, 6, 7, 9	Freedom from bias, framing & emotional loading
Timeliness	1, 8, 9	Relevance and currency of information
Effectiveness	3, 4, 9	Communication of intended message

5. SPECIFICATION REQUIREMENTS — HOW EACH WAS ADDRESSED

Evaluated against TRUE-10 spec true10-v0.1. Note: domain weights for **SOCIAL** differ from defaults — this is correct per spec §7, not a violation.
