TRUE-10 INDEX

OVERALL COMPLIANCE

X FAIL (min 70)

X FAIL (min 60)

Signals: L(d)=0.703 | G(d)=0.0 | D=0.96 · X commitment×procedural · X commitment×operational · FK
grade: 14.58, Passive: 11%

X FAIL (min 65)

Insufficient governance evidence. Layer scores — L(d)=0.96, G(d)=0.0, D=0.96. Formula: $0.25 \times 0.96 + 0.60 \times 0.0 + 0.15 \times 0.96 = 0.36$. ELI: 0.201/100 words | Absolutist: 0 | Hedging: 13 (positive). Hypercube: 0/20 cells with evidence. SIS flags: Performance claims without measurable metrics.

TIMELINESS — Relevance and currency of information

✓ PASS

Insufficient governance evidence. Layer scores — L(d)=0.65, G(d)=0.04, D=0.96. Formula: $0.25 \times 0.65 + 0.60 \times 0.04 + 0.15 \times 0.96 = 0.31$. Dates found: 2 | Recency: 100% | Temporal checks: 1/4. Hypercube: 1/20 cells with evidence. SIS flags: Performance claims without measurable metrics.

EFFECTIVENESS — Communication of intended message

✓ PASS

Insufficient governance evidence. Layer scores — L(d)=0.54, G(d)=0.0, D=0.96. Formula: $0.25 \times 0.54 + 0.60 \times 0.0 + 0.15 \times 0.96 = 0.255$. Intro: ✗ | Conclusion: ✓ | Coherence: 0.081/sentence. Hypercube: 0/20 cells with evidence. SIS flags: Performance claims without measurable metrics.

2. COMPLIANCE FLAGS

3. TRUE-10 FORMULA BREAKDOWN

Domain-specific weights applied: **SOCIAL**. Weights differ from defaults — this is correct per spec §7.

Dimension	Domain Weight	Score	Contribution
Truthfulness	0.3	0.2	0.06
Clarity	0.2	0.3	0.0591
Manipulation Integrity	0.2	0.36	0.072
Timeliness	0.15	0.31	0.0465

Effectiveness	0.15	0.25	0.0382
TRUE-10 INDEX			28 / 100

4. HOW THIS RESULT WAS CREATED — BIRD'S EYE OVERVIEW

Every TRUE-10 evaluation passes through 10 structural processing layers before producing a score. Each layer maps to one or more of the 5 output dimensions.

Layer	Name	Processing Role
1	Ingestion & Normalization	Tokenize and normalize input: $T \rightarrow T'$
2	Embedding Layer	$H2 = E(T')$ -- semantic token embeddings
3	Local Attention	$H3 = LocalAttn(H2)$ -- identify relevant spans
4	Global Attention	$H4 = GlobalAttn(H3)$ -- structure and flow
5	Multi-Head Perspective	$H5 = MHA(H4)$ -- tone, bias, framing
6	Contextual Disambiguation	$H6 = CtxDisamb(H5)$ -- resolve ambiguity
7	Consistency & Logic	$H7 = Reason(H6)$ -- detect contradictions
8	Cross-Reference	$H8 = CrossRef(H7, K)$ -- validate vs knowledge K
9	Scoring	$s(d) = Score(d)(H8)$ -- produce dimension scores
10	Governance	$A = G(T', H2...H9, s)$ -- apply compliance rules

4.1 Dimension to Layer Mapping

Dimension	Layers	What It Measures
Truthfulness	7, 8, 9	Factual accuracy, contradiction detection
Clarity	3, 4, 6, 9	Structure, readability, unambiguous language
Manipulation Integrity	5, 6, 7, 9	Freedom from bias, framing & emotional loading
Timeliness	1, 8, 9	Relevance and currency of information
Effectiveness	3, 4, 9	Communication of intended message

5. SPECIFICATION REQUIREMENTS — HOW EACH WAS ADDRESSED

Evaluated against TRUE-10 spec true10-v0.1. Note: domain weights for **SOCIAL** differ from defaults — this is correct per spec §7, not a violation.

Requirement	Spec Value	This Evaluation	OK
Endpoint	POST /v1/true10/score	POST /v1/true10/score	✓
Spec version	true10-v0.1	true10-v0.1	✓
Truthfulness score	t in [0,1]	0.2	✓
Clarity score	c in [0,1]	0.2956	✓
Manipulation Integrity	m in [0,1]	0.3599	✓

Timeliness score	tau in [0,1]	0.3101	✓
Effectiveness score	e in [0,1]	0.2549	✓
theta_t threshold	0.70	0.70 applied	✓
theta_c threshold	0.60	0.60 applied	✓
theta_m threshold	0.65	0.65 applied	✓
Domain weights	domain-specific (§7)	SOCIAL weights used	✓

meta.domain	string	social	✓
meta.evaluated_at	ISO 8601	2026-03-16T22:26:09	✓
meta.spec_version	true10-v0.x	true10-v0.1	✓
overall_compliant	bool	False	✓

6. IMPROVEMENT SUGGESTIONS

Focus on HIGH priority dimensions first. Switch to Claude or Copilot for AI-powered context-specific suggestions.

Top 3 Priority Actions:

1. Add citations — replace vague claims with 'According to [Source, Year]...'
2. Add a clear introduction stating the purpose and key message upfront
3. Break sentences over 25 words into shorter ones

TRUTHFULNESS — HIGH

- Add citations — replace vague claims with 'According to [Source, Year]...'
- Replace phrases like 'studies show' with specific studies, dates, and data
- Remove unverified claims or qualify them with 'reportedly' / 'allegedly'
- Include measurable evidence: statistics, percentages, experiment results

CLARITY — HIGH

- Break sentences over 25 words into shorter ones
- Replace jargon with plain language — define acronyms on first use
- Add subheadings to separate major sections
- Use bullet points or numbered lists for multi-part information

MANIPULATION INTEGRITY — HIGH

- Remove emotionally loaded words (shocking, unbelievable, revolutionary)
- Replace ALL CAPS emphasis with bold text — avoid shouting
- Reduce exclamation marks — limit to one maximum per document

- Present opposing viewpoints to demonstrate balanced analysis
- Replace absolute language (always, never, everyone knows) with qualified statements

TIMELINESS — HIGH

- Add a publication or last-updated date to the document
- Reference recent developments or data from the past 1-2 years
- Update statistics or figures that may be outdated
- Add current context or relevance to today's environment

EFFECTIVENESS — HIGH

- Add a clear introduction stating the purpose and key message upfront
- Include a conclusion or summary section reinforcing main points
- Use transition sentences between sections to guide the reader
- Ensure every paragraph has a clear topic sentence
- Remove off-topic content that dilutes the core message

7. DOCUMENT SUMMARY

[TRUE-10 GOVERNANCE REACTOR] 993 words, 62 sentences. Hypercube: 1/100 cells with evidence. $L_{\text{true}}=0.611$ | $L_{\text{false}}=0.008$ | $D=0.96$. MVIF FlowEff=1.6882 (Strong governance flow). $EE(t)=0.448$ ($\lambda=0.12$, $t=0\text{yr}$). FK grade: 14.58 | ELL: 0.201. Governance Quality: 24.48/100.
